Surface Preparation for Mining and Petrochemical Industries

Maintaining Processors

On Site Corrosion Removal

Support Boat Maintenance

Offshore Rig Maintenance

Cleaning Nuclear Plants

Controlled Corrosion Treatment

Servicing Petrochemical and Water Pipes

Grease and Silicon Removal

Train Maintenance

NDT/ Axle Inspections

IBIX is a specialist Italian manufacturer of high specification portable blasters. Advanced design ensures efficient, superior quality surface treatment finishes, even in normally inaccessible sites.

IBIX portable blasters use a wide range of media, and can be used for many tasks, including:

- Removing paint, coatings, mill scale, oil, dirt, etc. to International Standards on Surface Preparation.
- Cleaning iron, steel, aluminium, stainless steel, tiles, brick, ceramic, glass, concrete, chrome, and glass.
- Stripping and rust removal from machinery and vehicles
- Degreasing machinery and engine parts
- NDT control for welding inspection
- Cleaning heat exchangers

Because IBIX blasters are made of lightweight aluminium they are moved and operated by one man. They are easily transported by light vehicles, or by helicopter to remote and offshore projects.

IBIX compressors and air dryers can be carried or wheeled into position by hand, allowing for independent operation anywhere. Specially designed blasting guns with a tight operating radius allow access to difficult internal surfaces.

Wet blasting options minimise dust and contaminants.

Blasters operate from 10 Bar down to 0.2 Bar, allowing a range of surface treatments, from robust to very delicate. Low air requirements reduce the size of compressors and the required investment.
