

# IBIX Innovation in Portable Powder Coating for Australia...

IBIX® is the premier supplier of portable blasting and coating units. Our revolutionary systems are perfect for on-site surface preparation and maximum corrosion protection. Precise media flow controls provide the best quality surface finish from both our coating and blasting systems. IBIX is the complete portable one-man solution for contractor approved field-applied coatings, from the preparation of the anchor profile to the optimal thermal applied coating at the job site.

## Step 1:

Proper Surface preparation is the most important step in any coating application, and our lightweight portable aluminium systems are able to adjust to any on-site blast operations. Our micro-blast units are available in 4 sizes, with dual action wet and/or dry technology. We offer a variety of nozzles, extended lances, hose

attachments, and even a convenient backpack unit. IBIX is capable of blasting with a variety of green abrasives through our engineered water shroud, for dustless surface preparation, in the most challenging environments.

## Step 2:

On-Site coating is done with our multi-functional thermal flame spray Spartacus. The dry powder is pneumatically propelled through a gun-type applicator and heated onto the surface. The material dries almost instantaneously and is more durable than any traditional coating material. We offer a variety of spray gun attachments, for everything from small repairs to large volume coverage areas, up to 45 sq.m./hr.

The new Centurion is the latest technology providing a wider, knife-like spray pattern, increasing the coverage area by 3 to 4 times the standard of a high flow gun. Spartacus is the perfect on-site tool for most coating projects, from concrete to steel structures and pipelines, for the maximum isolative protection. Our specially formulated Green

Polymers offer both chemical resistance and flexibility, with excellent adhesion for maximum corrosion protection. Field Repairs are done with the same materials, for optimum protection at a molecular strength level.

IBIX is the premier supplier of Plascoat flame spray polymers, which are safe for the environment with NO VOC. IBIX systems are designed to be run with compressed air, rolled to the location for ease of operation and clean up. System is ASME compliant, and come with a 1-year manufacturer's warranty.
