Ibix blasters are portable and lightweight, yet engineered to use a wide variety of media with precision.

Ibix offers the ability to use garnet (from 30 to 350 mesh), sodium bicarbonate, calcium carbonate, dry ice, walnut shell, and more.

Clean brass, bronze, teak, antifoul, paint, gelcoat, aluminium, stainless steel, steel rust, osmosis blisters, engine parts, fire damage, rubber dinghies and stubborn grease with amazing results.

Blaster sizes range from the world's smallest professional, the ultra-portable 3 litre, up to an 80 litre option, catering to every yard requirement.

Ibix also provides European compressors designed to provide compressed air in small spaces, from the 300 l/m electric IB2, up to the petrol VRK pumping 2200 l/m - including a built-in air dryer.

Flexible, compact and portable IBIX equipment will speed jobs, and add to the range of work your yard can undertake, reliably and cost effectively.

Lightweight aluminium construction

Environmentally friendly - low dust emission

Single unit dual function - wet and/or dry

ASME Compliant # 41,780
